

# AppleWorks 6 Web Safe Colors

## Using "Web-safe" colors

The Default palette in the Accents window is arranged to make it easy to determine which colors are best to use when designing Web graphics (Web-safe colors).

In the Default palette:

- Of the shades of gray (the leftmost column), the first (white), fourth, seventh, tenth, 13th, and 16th (black) colors are Web-safe.
- Of the colors (the rest of the palette), all except the top two rows are Web-safe.
